Customer Support Interchangeability Request Form

The Customer Support Interchangeability Drawing (CSID) Team supports drawing releases for either existing drawing/PL updates or the creation of new interchangeable parts drawings for all 7-Series airframe programs. This form is intended as a guide for operators to provide information via service requests to assist in the investigation and scoping of interchangeability drawing updates.

Interchangeability Service Requests in BCS remain the responsibility of each fleet's Service Engineering Responsive team. Responsive Service Engineers may continue to work with the customers to provide the best solution available (repair, spares, NTO, etc.) to support the customer needs. Please include any reference files useful for preliminary review to the SR.
